

1. Reverse a string without slicing:

>> "Hello World"

ans:-

s=" Hello World "

print(reverse_s)

s.reverse()

15/20

2. Count words in a sentence:

>> "A Quick Brown Fox Jump Over the Lazy Dog"

ans:-

s= 'A Quick Brown Fox Jump Over the Lazy Dog'

a=s.split()

count=len(a)

print(count)

1

3. Remove duplicate characters.

>> "Carrot"

ans:-

s = "Carrot"

result = ""

for ch in s:

if ch not in result

result += ch

print(result)

unique = set(s)

4. What is difference between lists and sets?

ans:-

list:-

syntax []

index supported

it is hashable

allow duplicate value

unhashable

1

sets:-

syntax {}

not supported

set is unhashable

unorderd value are store

5. Can sets contains lists? If Yes How If no why?

ans:-

no

because set is store immutatable element

1

6. Why sets are faster?

ans:- because duplicate value are automatically remove

1

7. Difference between remove () and discard ()

ans:-

remove():-

remove use to remove element.

when element not exist that time remove() shows error.

discard():-

use for remove element.

when element not exist that time discard() do not show error

8. How many methods to insert elements in the list? Total Method?

ans:- 3

9. How many methods to delete elements in the lists? Total Method?

ans:- 5

10. How many Operators in Python Write their name in Explain?

ans:- 7

arithematic, relational, assignment, logical, identity, bitwise, identity operator

11. Write precedence Rule of arithmetic in Python?

ans:-

Parenthese ()

Exponent **

Multiplication/division *%

add/sub +-
data.sort()
Sorted()

12. How to sort elements in list

>> [5,11,14,7,8,3,2,5,9]

ans:-

data=[5,11,14,7,8,3,2,5,9]

print(sorted(data))

13. What is Dictionary

ans:- dictionary is collection of keys value

14. How many methods to create dictionary?

ans:- 3

15. How many methods to access value in dictionary?

ans:- 2

16. How many methods to delete elements in dictionary?

ans:- 4

17. How to perform mathematical operations in sets write method name?

ans:- netsted method

18. What is packing variable in tuple? Explain using example?

ans:-

stored many value in single tuple by using (,)

ex. data = "Hello", "apple", 20

print(data)

19. What is unpacking variables in tuple? Explain using example?

ans:-

unpacking is use to crate tuple to variable

ex. data = "Hello", "apple", 20

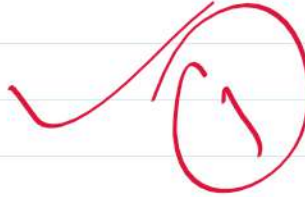

print(data)

name, fruit, number = data

print(name)

print(fruit)

print(number)

20. Difference between sets and dictionary?

ans:-

sets:-

syntax{}

not supported duplicate value

unorderd value are store

not accessing keys

dictionary:-

syntax dict()

support duplicate value

data store in key and value

accessing key or get
