20

Q.1 :-

Data = "Hello World"

~~print(reverse(Data))~~ . print(Data.reverse())

Q.2

Data = "A Quick Brown Fox Jump over
the Lazy Dog"

Count = 1.

for " " in Data :
 Count ++

print(Count)

split.

data.split()
 x
 len(x)

~~Data~~ → len(Data)

Q.3

Data = "Carrot"

for ch in Data :

 if (ch == ~~data~~ Data.ch) : remove(ch)

print(Data)

⇒ x = ''.join(data)

⇒ Y = set(x)

Qu.

List

Set

(1)

- | | |
|---|--|
| 1. Mutable Mutable (Unhashable) | • <u>Immutable</u> |
| 2. Ordered | • Unordered |
| 3. Elements can can be changed from the index. | • Elements cannot be changed from the index. |
| 4. Elements are mutable | • Elements are immutable |
| 5. Can be replaced. | Cannot be replaced |
| 6. In list [] are used. | • In set {} are used. |

Q.5.

No, the sets cannot contain lists because elements in set are immutable & list is mutable (1)

Q.6. Sets are faster because they contain less memory & the element in sets changed unlike lists. (1)

Q.7

Remove()

discard()

(1)

Raises key error if element ~~not~~ found.

NO error if element not found

Q.8.

→ There are three methods:-

append()

insert()

extend()

(1)

- Q.9.
1. remove() ✓
 2. delete() ✓
 3. clear() ✓
 4. pop() ✓ — last value

(1)

Q.10. ~~So pop(n)~~
So pop(n) → index value.

1. Arithmetic ✓
2. Comparison ✓
3. Assignment ✓
4. Logical ✓
5. Membership (in, not in)
6. Identity (is, is not) ✓

(1)

Q.11.

Q.12.

~~LIST~~ = Data [5, 11, 14, 7, 8, 3, 2, 5, 93]

~~Sorted = [Data]~~ Sorted(Data)

(1)

Print(Data)

(1)

Q.13.

→ Dictionary : is the collection of key & value.
The keys cannot be same (unique)

Q.14. These are two methods:-

1. {} brackets.
2. dict() ✓

(1)

Q.15 In dictionary we can access the value using key (1)

Q.16.

1. Remove() ✓
2. delete() ✓
3. clear() ✓
4. pop() ✓ → last (1)
5. popitem() → (a, 10)

17.

18. Packing variables in tuple means storing multiple values in tuples.

Example:-

t = (1, 2, 3, 4, 5)
print(t) (1)

Q.19.

→ Means assigning a tuple to each element to variable.

b = (1, 2, 3, 4)
a, b, c = b
print(a, b, c) (1)

key
1
val: 1
K

Q.20

Sets

Dictionary.

- | | |
|--|---|
| <ul style="list-style-type: none"> • It is mutable. • It contains only value. • Unordered. • No duplicate value. | <ul style="list-style-type: none"> Keys • It is immutable. • It contains key & value. • Ordered. • No duplicate key. |
|--|---|

(1)
